GERENCIAMENTO DE PRODUTOS PERIGOSOS

Olá, Seja Bem-vindo ao treinamento sobre gerenciamento de produtos.

Termos, Definições e Siglas.

1. Produto Químico – Toda substância na forma líquida, sólida ou gasosa utilizada nos processos. Todo produto químico deve ser considerado potencialmente perigoso para a saúde, para o meio ambiente ou para ambos.
2. Material Perigoso – Materiais perigosos, ou produtos químicos perigosos, são as substâncias simples ou compostas, que ao serem utilizadas em alguma etapa do processo industrial, tem potencial de atingir a saúde dos trabalhadores ou diminuir o nível de segurança das pessoas envolvidas no trabalho.
3. Ficha de Informações de Segurança de Produto Químico (FISPQ) – A FISPQ (Ficha de Informações de Segurança de Produtos Químicos) é um documento proveniente do fabricante, fornecedor ou importador contendo:

• Identificação, propriedades físicas e químicas, riscos à saúde e segurança, precauções para uso, formas de manejo seguro e disposição adequada;

• Informações vitais destinadas aos usuários finais de materiais perigosos, objetivando descrever como usar essas substâncias seguramente;

4. Relação de Produtos Químicos - É a lista que contém o registro dos produtos químicos.

5. Rótulo de Segurança – Traz impressa na embalagem dos materiais ou substâncias as informações mínimas necessárias para o administrador, transportador, usuário, bombeiro e socorrista em atendimento de emergência.

6. Ficha de Emergência - Documento aplicado ao transporte de produtos químicos perigosos. Fornece orientações que colaboram para a redução das consequências de um eventual acidente. Ao acompanhar o transporte do produto, deve ser um guia rápido e eficaz para uma situação de emergência. As técnicas de logística devem garantir que o fluxo de informações acompanhe todo o trajeto do produto químico. Além disso, é recomendável que as informações precedam o produto, de forma a assegurar que o usuário conheça, antecipadamente, as práticas seguras, e possa adotá-las com eficácia no transporte, recebimento, armazenagem, utilização e descarte.

7. Área de Risco - Área circunscrita por uma barreira física (cercas, guarda-corpos, codin, etc.) que possua controle de acesso apropriado para os riscos associados a materiais ou substâncias perigosas.

Armazenamento

• Os produtos, materiais ou substâncias potencialmente perigosas devem ser armazenados em locais adequados, que possuam ventilação e espaço suficiente para movimentação de pessoas de forma segura. Para os produtos líquidos e pastosos, serão exigidas baias de contenção ou cobertura, conforme critério de armazenamento estabelecido na FISPQ.

• Os locais devem possuir chuveiros e lava-olhos de emergência. Esses devem ser localizados próximos às áreas onde haja armazenagem e/ou manipulação de produtos químicos considerados de risco para a saúde humana. Eles devem estar acessíveis a no máximo 10 segundos, ou seja, cerca de 10 a 12 metros de distância de distância do ‘risco’ de acidente.

• Os produtos químicos deverão ser armazenados, preferencialmente, sobre pallets de borracha, ou material similar, que não possua arestas cortantes, pontiagudas e que não absorvam o material em caso de vazamento.

Transporte do Produto na Área

• Para transportar produtos, materiais ou substâncias potencialmente perigosas até os locais de trabalho deverão ser utilizados veículos motorizados e/ou não motorizados, ou qualquer dispositivo que permita o transporte seguro e adequado do produto, minimizando, sempre que possível, o esforço físico necessário para o transporte.

Utilização

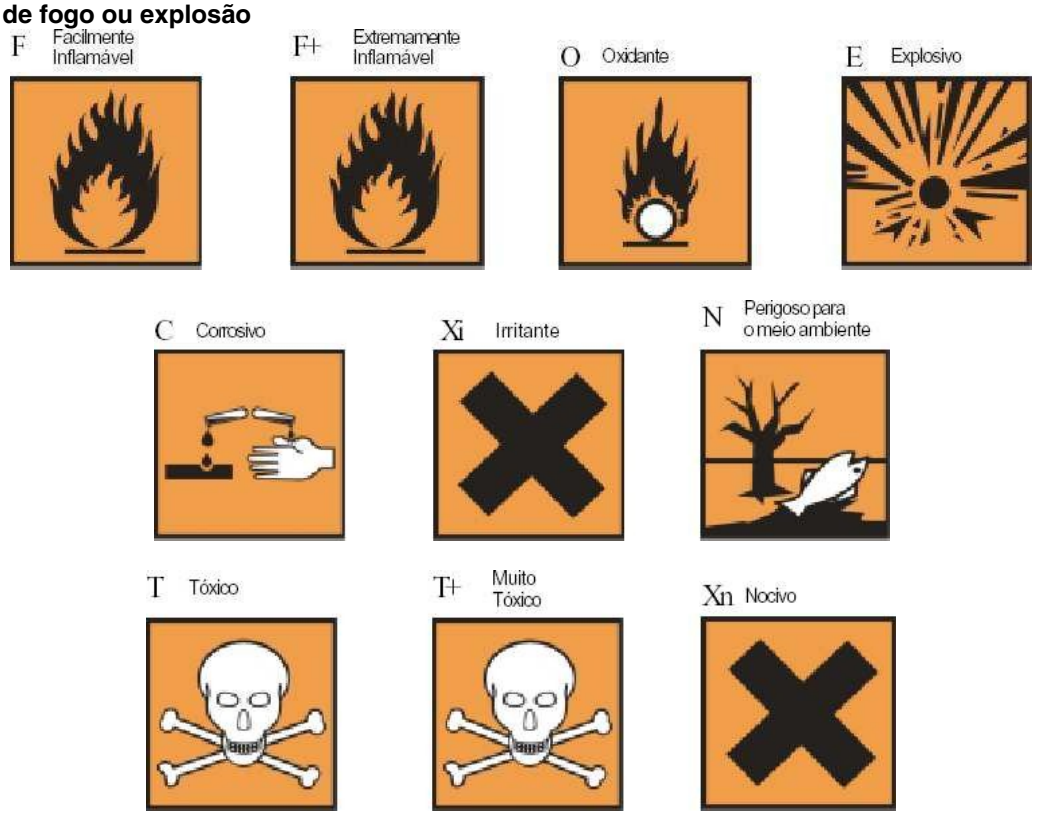
• Todos os empregados que trabalham direta ou indiretamente com produtos, materiais ou substâncias potencialmente perigosas devem ser treinados sobre os riscos e medidas preventivas que devem adotar para evitar lesões ou danos, bem como em todas as determinações desta Instrução Técnica.

• Somente os empregados treinados receberão uma identificação em sua HI que os permitirá ter acesso e utilizar produtos, materiais ou substâncias potencialmente perigosas.

Rotulagem

• Todos os containers, frascos, tanques e/ou qualquer vasilhame que contenham produtos, materiais ou substâncias potencialmente perigosas devem ser corretamente identificados e rotulados de modo a advertir os empregados sobre os riscos existentes. A identificação deverá ser feita através da simbologia da Comunidade Europeia ou padrão GHS conforme abaixo:

COMUNIDADE EUROPÉIA
Risco de fogo ou explosão



PADRÃO GHS

Sistema Harmonizado Globalmente para a Classificação e Rotulagem de Produtos Químicos.

Obrigada por participar desse treinamento e fique por dentro das novidades e futuras capacitações sobre o tema. Em caso de dúvidas, você pode procurar o seu Líder ou entrar em contato com a área de Educação Corporativo através do e-mail treinamento.gpsvc@gpssa.com.br.

Não esqueça de fazer a prova e assinar o seu treinamento. Até a próxima!

Termo de recebimento e compromisso

Declaro ter participado do Diálogo Diário de Segurança e recebido as orientações quanto ao tema presente neste documento. Afirmo ter lido e compreendido o conteúdo, estando ciente de meus direitos e obrigações sobre como proceder de forma ética no meu cotidiano de trabalho.
